AI, Social Media, and Growing Up

A Family Workshop on AI Literacy, Online Readiness, and Wellbeing

Parents and Students | **3-hour workshop** | **11am–2pm** | **Bring a phone or laptop**

AI and social media are becoming an unavoidable part of how young people learn, communicate, build relationships, and understand themselves. This practical, conversation-led workshop brings parents and students together to explore the science behind AI and social media, moving beyond the all-or-nothing hype often found in clickbait headlines. By understanding how these technologies work, what research can tell us about their benefits and risks, and where uncertainty remains, families can make more informed decisions about how they use them.

We begin by demystifying AI, exploring how it is made, why it sometimes gets things wrong, and how bots and online platforms shape our digital experiences. From there, we open up conversations about online safety, social media readiness, mental health, social isolation, and the ways AI can influence our thinking, memory, and sense of self.

Rather than prescribing a single set of rules for every household, the workshop gives families the knowledge and confidence to ask better questions, evaluate risks, and develop approaches that reflect their own values, circumstances, and needs. The goal is to make informed decisions together, keeping communication open as technology and young people's lives continue to change.

11:00–11:20 · 1. Understanding AI

- What AI is and how it works.
- Prompts, chatbots, and language models.
- What goes in and what comes out.
- **Parent–Student Conversation:** How do we use AI in our lives, and what can it do?

11:20–11:40 · 2. Evaluating AI Information

- How AI generates answers and makes errors.
- Assessing reliability and uncertainty.
- Checking sources and comparing claims.
- **Parent–Student Conversation:** How do we know when to trust an AI answer?

11:40–12:05 · 3. Online Safety and Readiness

- Social connection, comparison, and online pressure.
- Bots, recommendation systems, and synthetic media.
- Privacy, digital footprints, and consent.
- Age, maturity, and social media readiness.
- **Parent–Student Conversation:** What helps us navigate online spaces safely?

12:05–12:30 · 4. Technology and Wellbeing

- Digital connection, belonging, and support.
- Technology use, mood, and social isolation.
- AI responses, emotional influence, and dependency.
- Human relationships, boundaries, and support.
- **Parent–Student Conversation:** How does technology affect our wellbeing?

12:40–1:05 · 5. Learning and Personal Expression

- Why your teacher doesn't want you to use AI.
- Memory, practice, and independent reasoning.
- AI for research, writing, and creativity.
- **Parent–Student Conversation:** How can AI support learning without replacing it?

1:05–1:30 · 6. Informed Technology Choices

- Asking the right questions.
- Listening to each other's concerns.
- Setting healthy limits and boundaries.
- Identifying trusted sources of information.
- **Parent–Student Conversation:** What principles should guide our technology use?

1:30–2:00 · Family Conversation and Takeaways

Teaching parents and children to have factual conversations about screen time boundaries without all the media hype. Parents and children learn the science behind AI and how social media feeds are constructed.
