CHAPTER 1

Introduction

AI is already part of daily life in our community. Children meet it on their phones, workers meet it in their jobs, and teachers meet it in the essays handed in on Monday morning. The tools are arriving faster than the shared understanding of how to use them well. This booklet presents four short workshops designed to close that gap. Each one is practical, conversation-led, and built for people with no technical background. Each takes a different part of the community as its audience, and together they give a town, a school, or a neighborhood a common language for talking about AI.

Who we are

NWD Consulting Network, S.L. is an education-focused team working in product insights, measurement and research design, and course and curriculum development. Our approach is summed up in our motto: *bringing the education back to EdTech*. Every workshop in this booklet was designed by educators and researchers, not by software vendors.

What this booklet is for

This document is intended to help your community, school, or organization decide whether to sponsor one or more of these workshops for local families and workers, or to host them as a service offered to residents. The following chapters explain what is taught, who benefits, what is needed to run each course, and how it can be funded. The full course flyers are included at the back for reference.

CHAPTER 2

The Courses at a Glance

Course	Audience	Format	Bring
Boosting Job Skills with AI	Ages 15	6 weeks 1 day per week 2 hours per session	Laptop
AI Community and Culture	All community members ages 13	6 weeks 1 day per week 1.5 hours per session	Mobile Phone Not a Requirement
Teaching Learning and AI	Teachers of all subjects	One 4 hour workshop 10 00 14 00 (or 1 hour weekly for 5 weeks)	Laptop
AI Social Media and Growing Up	Parents and children ages 11	6 weeks 1.5 hours per week	Mobile Phone Not a Requirement

Taken together, the series covers the main places where AI touches community life:

- **At work:** practical skills that make people more capable and employable.
- **At home:** families talking openly about AI and social media.
- **In the classroom:** teachers who can keep students thinking for themselves.
- **Across the community:** a shared understanding of what AI is, what it is not, and what we want from it.

CHAPTER 3

Course Descriptions

1. Boosting Job Skills with AI

Ages 15+ | 6 weeks | 2 hours per week | Bring a laptop

A 6-Week Beginner Workshop in AI-Assisted Coding and Automation.
Programming can feel inaccessible when even the instructions are full of unfamiliar words. This workshop shows participants how to use AI as a guide through technical challenges, create simple digital projects, and build small automations with Python. No previous coding experience is needed.
The course is about learning how to describe a problem, break it into steps, ask useful questions, and check that a solution works. The final class brings these skills together in a practical project that solves a problem from work, study, or everyday life.

- **Week 1:** AI as Your Guide
- **Week 2:** Tools and Renderers
- **Week 3:** Patterns and Programming
- **Week 4:** Reading and Extracting Data
- **Week 5:** Connecting Python to AI
- **Week 6:** Build Your Own Automation

2. AI, Community, and Culture

All community members 13+ | 6 weeks | 1.5 hours per week

A 6-Week Community Workshop on the Myths and Magic of AI. This six-week workshop brings together people of all ages to demystify artificial intelligence (AI), cutting through complex industry jargon and demonstrating that many of its concepts are already part of our daily lives. The goal is to foster a community-based, intergenerational reflection on how to coexist with these tools while maintaining one's own independent judgment. The sessions range from the basic mechanics of large language models to philosophical conversations about the inevitable role of ai in society, ultimately offering critical thinking strategies for learning how to question and engage with AI in a conscious, informed way.

- **Week 1:** What Is AI?
- **Week 2:** Hallucinations and Model Collapse
- **Week 3:** Online Safety: Adults and Children
- **Week 4:** Is AI Really Going to Take Our Jobs?
- **Week 5:** Using AI at Work and in the Classroom
- **Week 6:** Using AI's Weaknesses Wisely

3. Teaching, Learning, and AI

For teachers **All subjects** **4 hours 10 00 to 14 00 or as a 5 week workshop**

A Practical Workshop for Teachers on Learning in the Age of AI.
Written by a research and assessment expert in the EdTech industry, this workshop shows educators how to use the weaknesses of AI to promote critical thinking. Teachers learn to design assignments that make students do the work themselves, and to turn AI literacy into a natural part of any existing course.

- **Session 1:** Teaching AI Literacy
- **Session 2:** Incorporating AI Literacy into Every Course
- **Session 3:** Stop Getting Slop-Slapped
- **Session 4:** Literary Greats vs. Outputting the Average
- **Session 5:** Avoid these Mistakes When Using AI as an Educator

4. AI, Social Media, and Growing Up

Parents and children 11+ **6 weeks** **1 hour per week** **Bring a phone or laptop**

Even with recent restrictions for users under 13, AI and social media remain an unavoidable part of how young people learn, communicate, and understand themselves. This conversation-led workshop brings parents and children together to explore the science behind these technologies, moving beyond all-or-nothing headlines. Families learn how AI works and why it sometimes does not, how bots and platforms shape our digital experiences, and how to talk about online safety, mental health, and the ways AI can influence our thinking. Rather than prescribing one set of rules, the workshop gives each family the knowledge and confidence to decide what works for its own values.

- **Week 1:** Understanding AI
- **Week 2:** Evaluating AI Information
- **Week 3:** Online Safety and Readiness
- **Week 4:** Technology and Wellbeing
- **Week 5:** Learning and Personal Expression
- **Week 6:** Informed Technology Choices

CHAPTER 4

Why These Courses Benefit the Community

A shared understanding

Today, AI is understood very unevenly. Some residents are enthusiastic, some are afraid, and many are simply unsure. These workshops replace hype and fear with a common, accurate picture of what AI can and cannot do. A community that shares this picture makes better decisions together, from the classroom to the council chamber.

Conversations across generations

Several of the courses put parents and children, or neighbors of different ages, in the same room. Younger people are often the first to use new tools, while older people bring experience and judgment. The workshops give both groups a structured, low-pressure way to talk to each other.

Skills that stay local

Participants leave with abilities they can use at work, at school, and at home. Teachers carry what they learn back into their classrooms, parents into their households, and workers into their jobs. The benefit multiplies as people share what they have learned.

Informed rather than dependent

A recurring theme across the series is thinking *with* AI without letting it think *for* us. Residents learn to question, check, and challenge AI output, but without the fear that makes clickbait hype. When users are able to think critically, the apply this in their school and work, protecting both themselves and their employers against errors, misinformation, and over-reliance.

Accessible to beginners

None of the courses assumes technical background. They use plain language, practical examples, and discussion, so that participation does not depend on prior education or experience with technology. Even the most technical course, for promoting job skills, assumes only the most basic skills: organizing files in a folder, going online, and using Excel or CSV format.

CHAPTER 5

How the Courses Help Families

Informed decisions at home

Families are being asked to make decisions about phones, accounts, chatbots, and homework help, often with little reliable information. The social media workshop gives parents and children the facts together, including where research is clear and where uncertainty remains. Each household can then choose rules that fit its own values rather than copying a one-size-fits-all approach.

Open communication

The aim is not to hand parents a list of prohibitions. It is to keep parents and children talking as technology and young people's lives change. Families who can ask each other honest questions are better placed to handle problems early.

Support for learning

Through the teachers' workshop, children encounter schoolwork designed to build their own thinking. Through the community workshop, families learn to see AI as a thinking partner and tool rather than an oracle to obey or something to be feared.

Opportunity for teenagers and adults

For ages 15 and up, the job skills course offers a first, friendly entry into coding and automation. This can help young people explore future careers and help parents refresh their skills, whether they attend as a family or separately.

Supporting working adults

Workers can use the automation course to save time on repetitive tasks and to feel confident with the tools their workplaces are adopting. The community and family courses also help working parents who may not have time to research these topics on their own.

CHAPTER 6

Skills We Teach

Boosting Job Skills with AI

- Using AI as a guide through unfamiliar tools and technical language
- Understanding how code becomes something a computer can run
- The building blocks of programming with Python
- Working with consistently formatted files and extracting information from documents
- Connecting a Python script to an AI model
- Describing a problem, breaking it into steps, and checking that a solution works
- Completing a practical project drawn from work, study, or everyday life

AI, Community, and Culture

- How large language models work, in plain language
- Recognizing hallucinations and AI errors
- Discussing AI's role in society, its risks, and its potential
- Critical thinking and evaluation of AI output
- Working with AI tools without surrendering one's own thinking

Teaching, Learning, and AI

- Understanding where AI is weak and how to use that in assessment design
- Designing assignments that promote critical thinking
- Making AI-resistant assignments in any subject
- Building AI literacy into existing courses

AI, Social Media, and Growing Up

- Communicating clearly as a family and asking better questions
- Making boundaries that are right for families
- How AI works and why it sometimes doesn't
- How predictive models influence digital experiences
- Online safety and mental health, guided by what research tells us
- Recognizing how AI can influence our thinking

CHAPTER 7

Funding and Delivery Options

We are flexible about how these courses reach the right audience. Three arrangements are possible, and the choice can differ from course to course.

Option A: Council or organization - sponsored

The host funds one or more courses so that they are free to participating families and workers. This option maximizes participation and reaches those who might not otherwise attend.

Option B: Offered for sale

The courses are offered to employees or residents on a paid basis, with the council or organization acting as host or partner by providing space and promotion. This option places little or no cost on host, but increases the cost to students.

Option C: Hybrid

The host subsidizes part of the cost, and participants contribute a smaller fee. Priority places can also be reserved for particular groups, such as local workers, teachers, or families.

Pricing and scheduling. Costs depend on the number of courses, group size, and delivery format. Please contact us for a quote. We will arrange an intake interview to understand your community's needs and recommend the right combination of courses or take suggestions for new inclusions.

CHAPTER 8

Minimum Requirements

Requirements for all courses

- **A place to show slides:** a projector and screen (or a large display) in a room that can be sufficiently darkened for the slides to be seen.
- **Seating** for all participants, with room for the instructor to move and for group discussion.

Additional Requirements by course

Course	What is needed
Boosting Job Skills with AI	Tables or desks where each student can sit with a laptop, wifi, and some power outlets within reach for attendees with low battery.
AI, Community, and Culture	Slide display and seating arranged for group discussion. Participants may wish to bring a phone or a laptop, but it is not required.
Teaching, Learning, and AI	Slide display and seating for a 4-hour session (10:00–14:00). Participants may wish to bring a phone or a laptop, but it is not required.
AI, Social Media, and Growing Up	Slide display and seating that allows parents and children to sit together. Participants may wish to bring a phone or a laptop, but it is not required.

Remote Courses

- **Alternatively, the course can be offered remotely online**, in which case each participant needs a laptop and an internet connection.

Not sure your venue qualifies? Libraries, schools, community centers, and municipal halls typically meet these needs. If a space falls short, we can discuss options, including online delivery, at the intake interview.

CHAPTER 9

Next Steps

1. **Review** the course flyers in the appendix and choose the course(s) that best fit your students' needs.
2. **Contact us** to schedule an intake interview. We will talk through your goals, audience, and venue.
3. **Choose a funding option:** council-sponsored, offered for sale, or a hybrid.
4. **Confirm a venue and schedule**, and we will prepare the course that's right for you.

We would be glad to bring these workshops to your school or organization.

Appendix: Course Flyers

The full flyers for each course follow, in this order:

A. Boosting Job Skills with AI

B. AI, Community, and Culture

C. Teaching, Learning, and AI

D. AI, Social Media, and Growing Up

Boosting Job Skills with AI

A 6-Week Beginner Workshop in AI-Assisted Coding and Automation

Ages 15+ | **6 weeks · 1 day per week** | **2 hours per session** | **Bring a laptop**

Programming can feel inaccessible when even the instructions are full of unfamiliar words. This beginner-friendly workshop shows participants how to use AI as a guide through technical challenges, create simple digital projects, and build small automations with Python. No previous coding experience is needed. This course is about learning how to describe a problem, break it into steps, ask useful questions, and check that a solution works.

We begin by using AI to navigate unfamiliar tools and understand how code becomes something a computer can run. Participants then learn the building blocks of programming, work with consistently formatted files, extract information from documents, and connect a Python script to an AI model. The final class brings these skills together in a practical project that solves a problem from work, study, or everyday life.

Week 1 · AI as Your Guide

- Not every Python has fangs.
- Coding environments, compilers, tokens, prompts, and APIs: demystifying the language of technology.
- How to ask for help when you don't know the technical vocabulary.
- Using AI as a guide to learn what you need to get started writing code.
- **Project:** Install Python and get a coding environment working with AI as your guide.

Week 2 · Tools and Renderers

- What is code? Interpreters, compilers, and how computers run instructions.
- Creating a polished document with Overleaf.
- Editing a simple HTML page with help from AI.
- **Project:** Publish a basic website with GitHub Pages.

Week 3 · Patterns and Programming

- Why consistent formatting makes automation possible.
- Variables, strings, lists, conditions, loops, and functions.
- Using Python to replace words and standardize data.
- **Project:** Clean a text file or spreadsheet and save a new copy.

Week 4 · Reading and Extracting Data

- Reading files and identifying predictable information.
- Using loops to process a folder of documents.
- Extracting fields and exporting structured data to CSV.
- **Project:** Turn a collection of standardised reports into a spreadsheet.

Week 5 · Connecting Python to AI

- What is an API key, and how does a program call an AI model?
- Sending instructions and text to a model and receiving a response.
- Keeping keys private and understanding API costs.
- **Project:** Build a lightweight AI text helper to rewrite or organise information.

Week 6 · Build Your Own Automation

- Identify a repetitive task from work, study, or everyday life.
- Plan the inputs, steps, outputs, and safety checks.
- Use AI to build, test, and debug a small Python tool.
- **Project:** Present a working automation and explain how it solves a problem.

No coding experience needed, but students will need: a laptop; a basic understanding of how to open, create and save files; how to use online apps; what is Excel/CSV; and a little bit of patience.

AI, Community, and Culture

A 6-Week Community Workshop on the Myths and Magic of AI

All Community Members Ages 13+ | **6 weeks · 1 day per week** | **1.5 hours per session** | **Phone or Laptop (not required)**

This six-week workshop brings together people of all ages to demystify artificial intelligence (AI), cutting through complex industry jargon and demonstrating that many of its concepts are already part of our daily lives. The goal is to foster a community-based, intergenerational reflection on how to coexist with these tools while maintaining one's own independent judgment. The sessions range from the basic mechanics of large language models to philosophical conversations about the inevitable role of ai in society, ultimately offering critical thinking strategies for learning how to question and engage with AI in a conscious, informed way.

Week 1 · What Is AI?

- Tokens? RAG? Multi-shot prompts? Demystifying the jargon.
- Building a model: what goes in and what comes out.
- Tokens and why we use them.
- **Community Centered Philosophy:** Now that we know how AI works, what do you think that means for your community and culture?

Week 2 · Hallucinations and Model Collapse

- Why AI-generated content gets labeled, and how watermarks work.
- Getting your money's worth: stop paying extra for LLM wrappers.
- Taking the disclaimer seriously.
- **Community and Philosophy:** Everyone knows about hallucinations, who should be responsible for verifying the output?

Week 3 · Online Safety: Adults and Children

- AI and personally identifying information.
- Who owns your input and your output?
- How do bots and algorithms influence your digital experience?
- **Community and Philosophy:** What are some ways we can keep our selves, our children, and our communities safe in online environments?

Week 4 · Is AI Really Going to Take Our Jobs?

- Human vs. AI: who does it better?
- Enhancing your workflow with AI.
- Working beside AI without outsourcing your thinking.
- **Community and Philosophy:** In what ways can AI benefit your immediate community and when should you be wary?

Week 5 · Using AI at Work and in the Classroom

- Compare LLM performance on writing tasks.
- How and when to fact-check AI output.
- Skills for the community:
  - **Teachers:** building AI-proof assignments.
  - **Students:** why your teacher is annoyed when you use AI to write your homework.
  - **Workers:** improving your workflow without making a mess.
- **Community and Philosophy:** How does AI output compare to the writing of literary greats like Rosalia de Castro and Eduardo Pondal? How can we encourage young authors to maintain their voice when writing?

Week 6 · Using AI's Weaknesses Wisely

- Skill beats shortcuts: using AI better than the next person.
- Skills for the community:
  - **Teachers:** a quick lesson in psychometrics and test design.
  - **Students:** how AI-generated assessments can be gamed, and why that matters.
  - **Workers:** understanding skills tests and resume filters.
- **Community and Philosophy:** How does AI literacy give you a competitive advantage over your peers in the classroom and in the workplace?

No technical background needed—just curiosity and a willingness to join the conversation.

Bringing the Education back to EdTech

Product Insights · Measurement & Research Design · Course and Curriculum Development

Teaching, Learning, and AI

A Practical Workshop for Teachers on Learning in the Age of AI

For Teachers **All Subjects** **Delivered as 4 Hours together or 5 weeks 1 hour per week**

Tired of being slop-slapped with essays students generated? Learn to make your students do the work. This workshop was written by a research and assessment expert in the EdTech industry to show educators how leverage the weaknesses of AI to promote critical thinking. We will discuss how design assignments that promote critical thinking and turn AI literacy into a natural part of any existing course.

10:00–10:40 · 1. Teaching AI Literacy

- Introductions.
- State standards and critical thinking competencies.
- Tokens, prompts, and large language models: demystifying the jargon.
- **Discussion:** What does it mean to demonstrate learning when a machine can generate the answer?

10:40–11:20 · 2. Incorporating AI Literacy into Every Course

- Incorporating AI literacy into mathematics, science, language and history.
  - The statistics of AI model development.
  - Critical source analysis of historical texts.
  - Identifying trustworthy sources.
  - Literary Analysis.

11:40–12:40 · 3. Stop Getting Slop-Slapped

- How AI generates plausible answers without necessarily understanding the subject.
- Shift the burden of grading and revision onto students.
- Designing lessons around critical source analysis.

13:00–13:25 · 4. Literary Greats vs. Outputting the Average

- Leveraging statistics to teach literature.
- Using model evaluations for comparative analyses.

13:25–13:50 · 5. Avoid these Mistakes When Using AI as an Educator

- Where AI generated learning materials commonly fail.
- Pattern recognition or construct mastery.
- Problems with AI autograders.

13:50–14:00 Takeaways and School Action Plan

- School action plan delivered by administrators.

No technical background required—just classroom experience, curiosity, and a willingness to rethink how learning is demonstrated.

Interested in bringing this workshop to your school?

Contact us to schedule an intake interview and tailor the session to your needs.

AI, Social Media, and Growing Up

A Family Workshop on AI Literacy, Online Readiness, and Wellbeing

Parents and Children ages 11+ | **6 weeks** | **1.5 hours per week** | **Bring a phone or laptop (not required)**

Despite age restrictions, artificial intelligence (AI) and social media are an inevitable part of young people's lives, influencing how they learn and communicate. This practical workshop brings parents and children together to explore the science behind these technologies and their real-world impact on digital safety and mental health—moving away from alarmist rhetoric. Rather than imposing universal rules, the sessions equip families with the knowledge needed to engage in clear dialogue, ask better questions, and make informed, collaborative decisions that reflect their own values.

Week 1 · Understanding AI

- What AI is and how it works.
- Prompts, chatbots, and language models.
- What goes in and what comes out.
- **Parent–Student Conversation:** How do we use AI in our lives, and what can it do?

Week 2 · Evaluating AI Information

- How AI generates answers and makes errors.
- Assessing reliability and uncertainty.
- Checking sources and comparing claims.
- **Parent–Student Conversation:** How do we know when to trust an AI answer?

Week 3 · Online Safety and Readiness

- Social connection or comparison.
- How recommendation systems and bots influence screen time.
- Privacy, digital footprints, and consent.
- Social media readiness about more than age.
- **Parent–Student Conversation:** What helps us navigate online spaces safely?

Week 4 · Technology and Wellbeing

- Technology use brings both support and social isolation.
- AI responses, emotional influence, and dependency.
- Human relationships and support networks.
- **Parent–Student Conversation:** How does technology affect our wellbeing?

Week 5 · Learning and Personal Expression

- Why your teacher doesn't want you to use AI.
- Memory, practice, and independent reasoning.
- AI for research, writing, and creativity.
- **Parent–Student Conversation:** How can AI support learning without replacing it?

Week 6 · Informed Technology Choices

- Asking the right questions.
- Listening to each other's concerns.
- Setting healthy limits and boundaries.
- Identifying trusted sources of information.
- **Parent–Student Conversation:** What principles should guide our technology use?

Skills that endure

Teaching parents and children to have factual conversations about screen time boundaries without all the media hype. Parents and children learn the science behind AI and how social media feeds are constructed.

Interested in bringing this workshop to your community?

Contact us to schedule an intake interview and we'll find the right team for your needs.
