CHAPTER 1

Introduction

AI is already part of daily life in our community. Children meet it on their phones, workers meet it in their jobs, and teachers meet it in the essays handed in on Monday morning. The tools are arriving faster than the shared understanding of how to use them well. This booklet presents several workshops designed to close that gap. Each one is practical, conversation-led, and built for people with no technical background. Each takes a different part of the community as its audience, and together they give a town, a school, or a neighborhood a common language for talking about AI.

Who we are

NWD Consulting Network, S.L. is an education-focused team working in product insights, measurement and research design, and course and curriculum development. Our approach is summed up in our motto: *bringing the education back to EdTech*. Every workshop in this booklet was designed by educators and researchers, not by software vendors.

What this booklet is for

This document is intended to help your community, school, or organization decide whether to sponsor one or more of these workshops for local families and workers, or to host them as a service offered to residents. The following chapters explain what is taught, who benefits, what is needed to run each course, and how it can be funded. The full course flyers are included at the back for reference.

CHAPTER 2

The Courses at a Glance

Course	Audience	Format	Bring
Boosting Job Skills with AI	Ages 15+	6 weeks 1 day per week 2 hours per session	Laptop
AI Community and Culture	All community members ages 13+	6 weeks 1 day per week 1.5 hours per session	Laptop or mobile phone (not required)
Teaching Learning and AI	Teachers of all grade levels and subjects	One day intensive workshop	Laptop or mobile phone (not required)
AI Social Media and Growing Up	Parents and children ages 11+	6 weeks 1 day per week 1.5 hours per session	Laptop or mobile phone (not required)
AI Literacy at Work	Ages 15+	One day intensive workshop	Laptop or mobile phone (not required)
AI Literacy at School	Ages 8+	One day workshop Session length varies by age	Colored pens or pencils

Note. Suggested formats are shown. All courses can be adapted for varying time constraints upon request with the exception of Boosting Job Skills with AI.

Taken together, the series covers the main places where AI touches everyday life:

- **At work:** practical skills that make people more capable and employable.
- **At home:** families talking openly about AI and social media.
- **In the classroom:** teachers who can keep students thinking for themselves.
- **Across the community:** a shared understanding of what AI is, what it is not, and what we want from it.

CHAPTER 3

Course Descriptions

1. Boosting Job Skills with AI

Ages 15+ | 6 weeks | 2 hours per week | Bring a laptop

A 6-Week Beginner Workshop in AI-Assisted Coding and Automation.

Programming can feel inaccessible when even the instructions are full of unfamiliar words. This workshop shows participants how to use AI as a guide through technical challenges, create simple digital projects, and build small automations with Python. No previous coding experience is needed.

The course is about learning how to describe a problem, break it into steps, ask useful questions, and check that a solution works. The final class brings these skills together in a practical project that solves a problem from work, study, or everyday life.

- **Session 1:** AI as your guide
- **Session 2:** Tools and renderers
- **Session 3:** Patterns and programming
- **Session 4:** Reading and extracting data
- **Session 5:** Connecting Python to AI
- **Session 6:** Build your own automation

2. AI, Community, and Culture

All community members 13+ | 6 weeks | 1.5 hours per week | Attendees may wish to bring a laptop but it is not required

A 6-Week Community Workshop on the Myths and Magic of AI.

This six-week workshop brings together people of all ages to demystify artificial intelligence (AI), cutting through complex industry jargon and demonstrating that many of its concepts are already part of our daily lives. The goal is to foster a community-based, intergenerational reflection on how to coexist with these tools while maintaining one's own independent judgment. The sessions range from the basic mechanics of large language models to philosophical conversations about the inevitable role of ai in society, ultimately offering critical thinking strategies for learning how to question and engage with AI in a conscious, informed way.

- **Session 1:** What Is AI?
- **Session 2:** Hallucinations and Model Collapse
- **Session 3:** Online safety: adults and children
- **Session 4:** Is AI REALLY going to take our jobs?
- **Session 5:** Using AI at work and in the classroom
- **Session 6:** Using AI's weaknesses wisely

3. Teaching, Learning, and AI

For teachers | All subjects | All grades | One day intensive workshop | Attendees may wish to bring a laptop but it is not required

A practical workshop for educators on teaching and learning in the age of AI.

Written by a research and assessment expert in the EdTech industry, this workshop shows educators how to use the weaknesses of AI to promote critical thinking. Teachers learn to design assignments that make students do the work themselves, and to turn AI literacy into a natural part of any existing course.

- **Session 1:** Teaching AI literacy
- **Session 2:** Avoid these mistakes when using AI as an educator
- **Session 3:** AI literacy into every course
- **Session 4:** A new age of assessment
- **Session 5:** Stop getting slop-slapped

4. AI, Social Media, and Growing Up

Parents and children 11+ | 6 weeks | 1.5 hours per week | Attendees may wish to bring a laptop but it is not required

A workshop for families about online readiness.

Even with recent restrictions for users under 13, AI and social media remain an unavoidable part of how young people learn, communicate, and understand themselves. This conversation-led workshop brings parents and children together to explore the science behind these technologies, moving beyond all-or-nothing headlines.

Families learn how AI works and why it sometimes does not, how bots and platforms shape our digital experiences, and how to talk about online safety, mental health, and the ways AI can influence our thinking. Rather than prescribing one set of rules, the workshop gives each family the knowledge and confidence to decide what works for its own values.

- **Session 1:** Understanding AI
- **Session 2:** Evaluating AI output
- **Session 3:** Online safety and readiness
- **Session 4:** Technology and wellbeing
- **Session 5:** Learning and personal expression
- **Session 6:** Informed technology choices

5. AI Literacy at Work

Employees 15+ | 5 weeks | One day intensive workshop | Attendees may bring a phone or laptop but it is not required

An AI literacy workshop developed for businesses to comply with the EU AI Literacy Act and to boost productivity.

Beginning with the statistics behind how large language models (LLMs) work, the workshop explores hallucinations and AI errors, how AI outputs content without necessarily understanding the topic, and when an expert is mandatory. Once we have covered the science and ethics, we begin to discuss working well with AI, when to push back, how to reduce API expenditures, and how to get the most of an LLM subscription.

Employees will leave the workshop with a better understanding of ethical use cases for LLM automation, how to identify which tasks can be automated, and how to prepare their files and data for automation.

All attendees or sponsoring parties will also receive a 10% discount on the introduction to automation course designed for absolute beginners, "Boosting Job Skills with AI".

- **Session 1:** What is AI?
- **Session 2:** Mistakes to avoid when using AI
- **Session 3:** You can't outsource critical thinking
- **Session 4:** How to boost productivity with AI
- **Session 5:** Getting the most of your LLM subscription

6. AI Literacy at School

Students 8+ | One half to one school day depending on age | Attendees should bring colored pencils or pens

An AI literacy workshop for school children customized to the needs of the school, grade, level of ability, or even course subject matter.

This course focuses on understanding why school and critical thinking remain integral parts of day to day life, despite being able to automate plausible answers. We discuss hard topics like how AI works and next token probability in words and contexts that are easier for young audiences to understand. We let those concepts build onto end-user responsibility, scientific accuracy, and the importance of maintaining personal voice in their writing. Students will work in groups toward age appropriate reasoning tasks centered on critical analysis of AI output. Schools or educators are encouraged to provide specific examples they would like to see used for their students, courses or subjects where they have the most concern, and ideas for the group work sessions that are most relevant to their own students. Hosting schools or classrooms will receive certificate of course completion that can be filled out for attending students. Participating schools may also request digital copies of the Session 1 slides on Understanding AI for use in their own classrooms.

- **Session 1:** Understanding AI
- **Session 2:** Why you still need to go to school
- **Session 3:** Identifying errors
- **Session 4:** Why you shouldn't use AI for school
- **Session 5:** Losing your voice to AI
- **Session 6:** Online safety and readiness

CHAPTER 4

Why These Courses Benefit the Community

A shared understanding

Today, AI is understood very unevenly. Some residents are enthusiastic, some are afraid, and many are simply unsure. These workshops replace hype and fear with a common, accurate picture of what AI can and cannot do. A community that shares this picture makes better decisions together, from the classroom to the council chamber.

Conversations across generations

Several of the courses put parents and children, or neighbors of different ages, in the same room. Younger people are often the first to use new tools, while older people bring experience and judgment. The workshops give both groups a structured, low-pressure way to talk to each other.

Skills that stay local

Participants leave with abilities they can use at work, at school, and at home. Teachers carry what they learn back into their classrooms, parents into their households, and workers into their jobs. The benefit multiplies as people share what they have learned.

Informed rather than dependent

A recurring theme across the series is thinking *with* AI without letting it think *for* us. Residents learn to question, check, and challenge AI output, but without the fear that makes clickbait hype. When users are able to think critically, the apply this in their school and work, protecting both themselves and their employers against errors, misinformation, and over-reliance.

Accessible to beginners

None of the courses assumes technical background. They use plain language, practical examples, and discussion, so that participation does not depend on prior education or experience with technology. Even the most technical course, for promoting job skills, assumes only the most basic skills: organizing files in a folder, going online, and using Excel or CSV format.

CHAPTER 5

How the Courses Help Families

Informed decisions at home

Families are being asked to make decisions about phones, accounts, chatbots, and homework help, often with little reliable information. The social media workshop gives parents and children the facts together, including where research is clear and where uncertainty remains. Each household can then choose rules that fit its own values rather than copying a one-size-fits-all approach.

Open communication

The aim is not to hand parents a list of prohibitions. It is to keep parents and children talking as technology and young people's lives change. Families who can ask each other honest questions are better placed to handle problems early.

Support for learning

Through the teachers' workshop, children encounter schoolwork designed to build their own thinking. Through the community workshop, families learn to see AI as a thinking partner and tool rather than an oracle to obey or something to be feared. Courses designed for school aged children strengthen decision making skills that will extend beyond the classroom. Students will learn to think critically about information shared with them and use their own best judgement on how to respond in various situations.

Opportunity for teenagers and adults

For ages 15 and up, the job skills course offers a first, friendly entry into coding and automation. This can help young people explore future careers and help parents refresh their skills, whether they attend as a family or separately.

Supporting working adults

Workers can use the automation course to save time on repetitive tasks and to feel confident with the tools their workplaces are adopting. The community and family courses also help working parents who may not have time to research these topics on their own.

CHAPTER 6

How the Courses Help Businesses

A shared baseline across the team

Employees are already using AI at work, whether or not the company has a policy for it. Without training, that use is uneven: some staff avoid the tools, others trust them too much, and few can say when an output should not be relied on. The AI Literacy at Work workshop gives everyone the same plain-language foundation, so that teams use AI with the same expectations and the same habits of checking.

Fewer costly mistakes

AI errors are expensive when they reach a client, a contract, or a public report. Participants learn where AI-generated material commonly fails, why a fluent answer is not necessarily a correct one, and when an expert is mandatory. They also learn to protect confidential data and intellectual property, which reduces the risk of leaks through public tools.

Supporting compliance with the EU AI Act

Since 2 February 2025, Article 4 of the EU AI Act has required organizations that provide or deploy AI systems to take measures that support the AI literacy of their staff and of others who use AI on their behalf. The duty applies at every risk level, so even a simple internal chatbot triggers it. The 2026 Digital Omnibus softened the wording: employers must now support the development of AI literacy rather than guarantee a particular level for each individual. The obligation itself remains, and penalties are set by each member state. A role-appropriate workshop is a practical way to meet it, and attendance records and completion certificates help document the measures taken. No certificate is required by law, and this workshop is one part of a compliance approach, not a substitute for legal advice.

Better returns on AI spending

Many organizations pay for AI subscriptions that are used well by only a few people. The workshop shows staff where AI saves the most time, how to describe tasks so outputs are usable the first time, and how to prepare files for automation. It also covers how to reduce API and subscription costs, so spending follows the value delivered.

A path to deeper automation

Teams that want to go further can continue to *Boosting Job Skills with AI*. All attendees and sponsoring organizations receive a 10% discount on that course.

CHAPTER 7

Skills We Teach

Boosting Job Skills with AI

- Using AI as a guide through unfamiliar tools and technical language
- Understanding how code becomes something a computer can run
- The building blocks of programming with Python
- Working with consistently formatted files and extracting information from documents
- Connecting a Python script to an AI model
- Describing a problem, breaking it into steps, and checking that a solution works
- Completing a practical project drawn from work, study, or everyday life

AI, Community, and Culture

- How large language models work, in plain language
- Recognizing hallucinations and AI errors
- Discussing AI's role in society, its risks, and its potential
- Critical thinking and evaluation of AI output
- Working with AI tools without surrendering one's own thinking

Teaching, Learning, and AI

- Understanding where AI is weak and how to use that in assessment design
- Designing assignments that promote critical thinking
- Making AI-resistant assignments in any subject
- Building AI literacy into existing courses

AI, Social Media, and Growing Up

- Communicating clearly as a family and asking better questions
- Making boundaries that are right for families
- How AI works and why it sometimes doesn't
- How predictive models influence digital experiences
- Online safety and mental health, guided by what research tells us
- Recognizing how AI can influence our thinking

AI Literacy at Work

- Understanding how LLMs generate responses and why they make mistakes
- Using prompts, RAG, and other AI tools effectively
- Evaluating accuracy, sources, and AI-generated materials
- Applying critical thinking and end-user responsibility
- Identifying tasks suited to automation and knowing when to keep humans involved
- Protecting privacy, intellectual property, and ethical use
- Preparing files and workflows for AI-assisted tasks
- Improving productivity while managing AI costs

AI Literacy at School

- Understanding how AI, chatbots, and language models work
- Recognizing AI-generated errors and checking sources
- Developing critical thinking and independent reasoning
- Using AI responsibly for research, writing, and creativity
- Recognizing how AI affects personal voice and creative expression
- Understanding recommendation systems and their influence on screen time
- Protecting privacy, digital footprints, and consent
- Understanding ownership of AI inputs and outputs

CHAPTER 8

Funding and Delivery Options

We are flexible about how these courses reach the right audience. Any course can be tailored to a one-day or once per week format. Courses be delivered in-person rather than online where consultants are available or with coverage of travel expenses for one day workshops. Three payment arrangements are possible, and the choice can differ from course to course.

Option A: Council or organization - sponsored

The host funds one or more courses so that they are free to participating families and workers. This option maximizes participation and reaches those who might not otherwise attend.

Option B: Offered for sale

The courses are offered to employees or residents on a paid basis, with the council or organization acting as host or partner by providing space and promotion. This option places little or no cost on host, but increases the cost to students.

Option C: Hybrid

The host subsidizes part of the cost, and participants contribute a smaller fee. Priority places can also be reserved for particular groups, such as local workers, teachers, or families.

Pricing and scheduling. Costs depend on the number of courses, group size, and delivery format. Please contact us for a quote. We will arrange an intake interview to understand your community's needs and recommend the right combination of courses or take suggestions for new inclusions.

CHAPTER 9

Minimum Requirements

Requirements for all courses delivered as in-person sessions

- **A place to show slides:** a projector and screen (or a large display) in a room that can be sufficiently darkened for the slides to be seen.
- **Seating** for all participants, with room for the instructor to move and for group discussion.

Additional requirements by course for in-person sessions

Course	What is needed
Boosting Job Skills with AI	Tables or desks where each student can sit with a laptop, wifi, and some power outlets within reach for attendees with low battery.
AI, Community, and Culture	Slide display and seating arranged for group discussion. Participants may wish to bring a phone or a laptop, but it is not required.
Teaching, Learning, and AI	Slide display and seating for a 4-hour session (10:00–14:00) or weekly sessions. Participants may wish to bring a phone or a laptop, but it is not required.
AI, Social Media, and Growing Up	Slide display and seating that allows parents and children to sit together. Participants may wish to bring a phone or a laptop, but it is not required.
AI Literacy at Work	Slide display and seating arranged for group discussion. Participants may wish to bring a phone or a laptop, but it is not required.
AI Literacy at School	Slide display and seating arranged for group discussion. Exact requirements will vary by age group and specific activities requested by the school.

Remote Courses

- **Alternatively, the course can be offered remotely online**, in which case each participant needs a laptop and an internet connection.

Not sure your venue qualifies? Libraries, schools, community centers, and municipal halls typically meet these needs. If a space falls short, we can discuss options, including online delivery, at the intake interview.

CHAPTER 10

Next Steps

1. **Review** the course flyers in the appendix and choose the course(s) that best fit your students' needs.
2. **Contact us** to schedule an intake interview. We will talk through your goals, audience, and venue.
   - : +34 698 13 26 44
   - : sarah@nwd-consulting.com
3. **Choose a funding option:** council-sponsored, offered for sale, or a hybrid.
4. **Confirm a venue and schedule**, and we will prepare the course that's right for you.

We would be glad to bring these workshops to your school or organization.

Appendix: Course Flyers

The full flyers for each course follow, in this order:

A. Boosting Job Skills with AI

B. AI, Community, and Culture

C. Teaching, Learning, and AI

D. AI, Social Media, and Growing Up

E. AI Literacy At Work

F. AI Literacy At School

Boosting Job Skills with AI

A 6-week beginner workshop in AI-assisted coding and automation

Ages 15+ | **6 weeks · 1 day per week** | **2 hours per session** | **Bring a laptop**

Programming can feel inaccessible when even the instructions are full of unfamiliar words. This beginner-friendly workshop shows participants how to use AI as a guide through technical challenges, create simple digital projects, and build small automations with Python. No previous coding experience is needed. This course is about learning how to describe a problem, break it into steps, ask useful questions, and check that a solution works.

We begin by using AI to navigate unfamiliar tools and understand how code becomes something a computer can run. Participants then learn the building blocks of programming, work with consistently formatted files, extract information from documents, and connect a Python script to an AI model. The final class brings these skills together in a practical project that solves a problem from work, study, or everyday life.

Session 1 · AI as your guide

- Not every Python has fangs.
- Coding environments, compilers, tokens, prompts, and APIs: demystifying the language of technology.
- How to ask for help when you don't know the technical vocabulary.
- Using AI as a guide to learn what you need to get started writing code.
- **Project:** Install Python and get a coding environment working with AI as your guide.

Session 2 · Tools and renderers

- What is code? Interpreters, compilers, and how computers run instructions.
- Creating a polished document with Overleaf.
- Editing a simple HTML page with help from AI.
- **Project:** Publish a basic website with GitHub Pages.

Session 3 · Patterns and programming

- Why consistent formatting makes automation possible.
- Variables, strings, lists, conditions, loops, and functions.
- Using Python to replace words and standardize data.
- **Project:** Clean a text file or spreadsheet and save a new copy.

Session 4 · Reading and extracting data

- Reading files and identifying predictable information.
- Using loops to process a folder of documents.
- Extracting fields and exporting structured data to CSV.
- **Project:** Turn a collection of standardised reports into a spreadsheet.

Session 5 · Connecting Python to AI

- What is an API key, and how does a program call an AI model?
- Sending instructions and text to a model and receiving a response.
- Keeping keys private and understanding API costs.
- **Project:** Build a lightweight AI text helper to rewrite or organise information.

Session 6 · Build your own automation

- Identify a repetitive task from work, study, or everyday life.
- Plan the inputs, steps, outputs, and safety checks.
- Use AI to build, test, and debug a small Python tool.
- **Project:** Present a working automation and explain how it solves a problem.

No coding experience needed, but students will need: a laptop; a basic understanding of how to open, create and save files; how to use online apps; what is Excel/CSV; and a little bit of patience.

Interested in bringing this workshop to your community?

AI, Community, and Culture

A 6-week community workshop on the myths and magic of AI

All community members ages 13+ | **Suggested: 6 weeks · 1 day per week** | **1.5 hours per session** | **Mobile phone (not required)**

This six-week workshop brings together people of all ages to demystify artificial intelligence (AI), cutting through complex industry jargon and demonstrating that many of its concepts are already part of our daily lives. The goal is to foster a community-based, intergenerational reflection on how to coexist with these tools while maintaining one's own independent judgment. The sessions range from the basic mechanics of large language models to philosophical conversations about the inevitable role of ai in society, ultimately offering critical thinking strategies for learning how to question and engage with AI in a conscious, informed way.

Session 1 · What is AI?

- Tokens? RAG? Multi-shot prompts? Demystifying the jargon.
- Building a model: what goes in and what comes out.
- Tokens and why we use them.
- **Community Centered Philosophy:** Now that we know how AI works, what do you think that means for your community and culture?

Session 2 · Hallucinations and model collapse

- Why AI-generated content gets labeled, and how watermarks work.
- Getting your money's worth: stop paying extra for LLM wrappers.
- Taking the disclaimer seriously.
- **Community and Philosophy:** Everyone knows about hallucinations, who should be responsible for verifying the output?

Session 3 · Online safety: adults and children

- AI and personally identifying information.
- Who owns your input and your output?
- How do bots and algorithms influence your digital experience?
- **Community and Philosophy:** What are some ways we can keep our selves, our children, and our communities safe in online environments?

Session 4 · Is AI REALLY going to take our jobs?

- Human vs. AI: who does it better?
- Enhancing your workflow with AI.
- Working beside AI without outsourcing your thinking.
- **Community and Philosophy:** In what ways can AI benefit your immediate community and when should you be wary?

Session 5 · Using AI at work and in the classroom

- Compare LLM performance on writing tasks.
- How and when to fact-check AI output.
- Skills for the community:
  - **Teachers:** building AI-proof assignments.
  - **Students:** why your teacher is annoyed when you use AI to write your homework.
  - **Workers:** improving your workflow without making a mess.
- **Community and Philosophy:** How does AI output compare to the writing of literary greats like Rosalia de Castro and Eduardo Pondal? How can we encourage young authors to maintain their voice when writing?

Session 6 · Using AI's weaknesses wisely

- Skill beats shortcuts: using AI better than the next person.
- Skills for the community:
  - **Teachers:** a quick lesson in psychometrics and test design.
  - **Students:** how AI-generated assessments can be gamed, and why that matters.
  - **Workers:** understanding skills tests and resume filters.
- **Community and Philosophy:** How does AI literacy give you a competitive advantage over your peers in the classroom and in the workplace?

No technical background needed—just curiosity and a willingness to join the conversation.

Bringing the Education back to EdTech

Product Insights · Measurement & Research Design · Course and Curriculum Development

Teaching, Learning, and AI

A practical workshop for educators on teaching and learning in the age of AI

For Teachers | **All Subjects** | **All Grades** | **Suggested: full day intensive workshop**

Tired of being slop-slapped with essays students generated? Learn how to make your students do the work again. Written by a research and assessment expert in the EdTech industry, this workshop shows educators how to leverage the weaknesses of AI to promote critical thinking. We'll discuss how to design assignments that encourage deeper thinking and make AI literacy a natural part of any existing course.

This course covers the basics of how LLMs work, how that influences their output, common mistakes to avoid when using AI, and—most importantly—how to put the effort of critical thinking back on the students. We'll explore ways to incorporate AI literacy into your courses by designing assessments around the tasks AI does poorly. Rather than creating isolated, subject-specific discussions, this shared workshop builds a stronger foundation for understanding how the math and statistics behind model development influence AI output across all contexts.

Session 1 · Teaching AI literacy

- State standards and critical thinking competencies.
- Tokens, prompts, and large language models: demystifying the jargon.
- Learning how AI works.

Session 2 · Avoid these mistakes as an educator

- Where AI generated learning materials commonly fail.
- Pattern recognition or construct mastery.
- Problems with AI autograders.

Session 3 · Incorporating AI literacy into every course

How to talk about AI Literacy in the context of any course subject.

- Leveraging statistics to teach literature.
- Critical source analysis.
- Accuracy and precision.

Session 4 · A new age of assessment

- Where LLMs are failing.
- Leveraging AI's weaknesses to design assessments that AI can't do.

Session 5 · Stop getting slop-slapped

- Bringing critical thinking back to the classroom.
- Continuing the discussion on AI-proof assessments.

Takeaways that are yours to keep

- A digital copy of the slides on AI Literacy that you can use in your own classroom.
- Less time grading AI-slop.
- A digital certificate of completion.

Payment & Registration

- Institutions who would like to sponsor this workshop or teachers who would like to participate as a group of more than 8 may apply for discounted group rates.
- Teachers in low income school districts who are lacking institutional support for professional development may request information about special pricing.
- Participating teachers and schools will also receive a 10% discount on the AI Literacy at School course for their students.

Interested in bringing this workshop to your community?

Contact us to schedule an intake interview and we'll find the right team for your needs.

AI, Social Media, and Growing Up

A family workshop on AI literacy, online readiness, and wellbeing

Parents and Children ages 11+ | **Suggested: 6 weeks - 1.5 hours per week** | **Attendees may wish to bring a phone or laptop (not required)**

Despite age restrictions, artificial intelligence (AI) and social media are an inevitable part of young people's lives, influencing how they learn and communicate. This practical workshop brings parents and children together to explore the science behind these technologies and their real-world impact on digital safety and mental health—moving away from alarmist rhetoric. Rather than imposing universal rules, the sessions equip families with the knowledge needed to engage in clear dialogue, ask better questions, and make informed, collaborative decisions that reflect their own values.

Session 1 · Understanding AI

- What AI is and how it works.
- Prompts, chatbots, and language models.
- What goes in and what comes out.
- **Parent–Student Conversation:** How do we use AI in our lives, and what can it do?

Session 2 · Evaluating AI output

- How AI generates answers and makes errors.
- Assessing reliability and uncertainty.
- Checking sources and comparing claims.
- **Parent–Student Conversation:** How do we know when to trust an AI answer?

Session 3 · Online safety and readiness

- Social connection or comparison.
- How recommendation systems and bots influence screen time.
- Privacy, digital footprints, and consent.
- Social media readiness about more than age.
- **Parent–Student Conversation:** What helps us navigate online spaces safely?

Session 4 · Technology and wellbeing

- Technology use brings both support and social isolation.
- AI responses, emotional influence, and dependency.
- Human relationships and support networks.
- **Parent–Student Conversation:** How does technology affect our wellbeing?

Session 5 · Learning and personal expression

- Why your teacher doesn't want you to use AI.
- Memory, practice, and independent reasoning.
- AI for research, writing, and creativity.
- **Parent–Student Conversation:** How can AI support learning without replacing it?

Session 6 · Informed technology choices

- Asking the right questions.
- Listening to each other's concerns.
- Setting healthy limits and boundaries.
- Identifying trusted sources of information.
- **Parent–Student Conversation:** What principles should guide our technology use?

Takeaways

Skills that endure Parents and children learn:

- to have factual and respectful conversations about screen time boundaries without all the media hype.
- the science behind AI and how social media feeds are constructed.
- the science behind AI and how social media feeds are constructed.
- to to stay safer in online environments.

Certificate of completion Families that attend the course will receive a certificate of completion.

Product Insights · Measurement & Research Design · Course and Curriculum Development

AI Literacy at Work

An intesive AI literacy workshop for businesses and employers

Ages 15+ | **Suggested: 1 full working day** | **Attendees may wish to bring a laptop but it is not required**

An AI Literacy workshop developed for businesses to comply with the EU AI Literacy Act and to boost productivity. This workshop cuts through the hype to show what AI tools can and cannot do, and how to use them well in everyday work. Participants learn to spot where AI-generated material fails, to keep their own critical thinking in the loop, and to identify tasks worth automating, all while protecting their data and keeping costs under control. No technical background is required, and every session is built around real workplace tasks, so teams leave with habits they can apply the next day. The in-person nature of the workshop allows teams to share together examples they have uncovered in the workplace, identify repetitive tasks that could ethically be automated, and improve prompting strategies.

Course sessions can be adapted to several delivery formats including one full working day, two half-days, or once per week for 5 weeks.

Session 1 · What is AI?

In the first session of this course, we introduce the basics of how LLMs work. A non-math intensive introduction to the statistics that drive the generated output we see.

- "RAG", Prompt Engineering, and "Multi-Shot": demystifying the jargon.
- What are tokens and why do we use them?
- Training data, statistics, and output.

Session 2 · Mistakes to avoid when using AI

In our second session, we cover where AI common fails, ethical use cases, and end-user responsibility.

- End-user responsibility.
- Where AI generated materials commonly fail.
- Accuracy, precision, and ethical use.
- Online safety and protection of intellectual property.

Session 3 · You can't outsource critical thinking

In this session we discuss how to avoid the Dunning-Kruger amplification when faced with pedantic feedback.

- Can anyone with a Claude account do it as well as you?
- Why LLMs can easily fool non-experts.
- Critical source analysis.
- Knowing when to push back.

Session 4 · How to boost productivity with AI

Now that we have learned how NOT to outsource our thinking, we move into how to use AI efficiently and ethically.

- Identifying the types of tasks that can and cannot be automated.
- Where LLMs are most helpful.
- Agents: When to draw the line on more AI.
- How to reduce AI expenditures by up to 95%.

Session 5 · Getting the most of your LLM subscription

In this session, we open the floor for teams to discuss relevant examples where AI can be used ethically in the workplace and tailor the session to discuss:

- How to prepare your files to automate tasks.
- More effective prompting strategies.
- Learning to describe your tasks.
- What to expect in the output.
- Defining success.

Takeaways

Aside from an improved understanding the science behind AI and how to use AI efficiently and effectively, workers receive:

- Improved problem solving skills.
- A digital certificate of completion.
- A 10% discount on the next course "Boosting Job Skills with AI".

No coding experience needed.
This course prepares workers for the next course "Boosting Job Skills with AI, an introduction to the most basic first steps in automation.

AI Literacy at School

A workshop for students on AI literacy, online safety, and critical thinking

Children ages 8+ | **Half to one school day** | **Parents and educators are welcomed** | **Attendees should bring colored pencils or markers**

It can be difficult to understand the reality of how AI works and how it can be used safely when faced with all-or-nothing clickbait opinion articles. This workshop is designed to help children understand when they can use AI for learning, when they should not, and the reasons why. Despite age restrictions, artificial intelligence (AI) and social media are an inevitable part of young people's lives, influencing how they learn and communicate. We will explore the science behind AI and social media; their real-world impact on digital safety, and mental health, and learning; and how to use AI as a tool instead replacing their own voice.

This course can be tailored for students of different age groups and levels of ability. The course can also be modified to create examples relevant to specific courses such as math, statistics, science, history, political science, or literature.

Session 1 · Understanding AI

- What is AI and how does it work?
- Prompts, chatbots, and language models.
- What goes in and what comes out.

Session 2 · Why you still need to go to school

- How AI generates answers and makes errors.
- End-user responsibility.
- Checking sources and comparing claims.

Session 3 · Identifying errors

- Students work in groups to identify errors in LLM generated images (or other age appropriate reasoning tasks).
- We conclude the activity with a discussion on how this translates to other tasks where we use AI.

Session 4 · Why you shouldn't use AI for school

- Memory, practice, and independent reasoning.
- AI for research, writing, and creativity.
- Next token probability and personal voice.

Session 5 · Losing your voice to AI

- Students compare the writing style of different LLMs against human authored texts for similarities and differences (or other age appropriate reasoning tasks).
- We conclude the activity with a discussion on how next token probability limits creativity, how bored teachers are of reading the same essay, and what that means about their future job skills.

Session 6 · Online safety and readiness

- How recommendation systems and bots influence screen time.
- Privacy, digital footprints, and consent.
- Who owns the input and the output?

Note. For older students, the group working sessions may include activities like comparing literary voice, or decision making with AI.

Takeaways

Hosting schools or classrooms will receive certificate of course completion that can be filled out for attending students.
Participating schools may also request digital copies of the Session 1 slides on Understanding AI for use in their own classrooms.
